Not another Raspberry PI case.

The housing can be closed without screws. Only the Pi has to be fixed with screws.

Update

- Raspberry Pi shifted one millimeter to the right so that the HDMI cable is not bent too much.
- The SD card slot is enlarged to make it easier to insert and remove
- Added SD card blocker below the slot, so that the card does not accidentally disappear into the case
- Better snap in from the top cover
- Opening to the interfaces and cables slightly reduced If you found this useful, please donate what you think it is worth to my paypal.me.

Help cover the time of design.
Thanks, Enjoy!
